Nonfunctional Requirements

Detailed project document · Prepared for project completion and review

Project reference information

Item	Known project detail
Project	Health360 Clinical & Healthcare Risk Analysis
Dataset size	5,000 patient/person records
Dataset fields	17 columns; exact field names and definitions must be copied from the source dataset's header row/data dictionary
Analytics tool	Tableau
Visual assets	9 worksheets/visualizations and a dashboard; a Tableau story for Patient Risk & Lifestyle Insights was also part of the project workflow
Repository	https://github.com/en25cs3010918-ctrl/Health360-Healthcare-Risk.git
Website	https://en25cs3010918-ctrl.github.io/Health360-Healthcare-Risk/
Scope caution	This is an educational data-visualization project. It is not a clinically validated diagnostic, prognostic, or treatment system.

Usability

The site and dashboard should use a predictable navigation structure, concise headings, descriptive chart titles, readable text, and consistent formatting. Users should be able to distinguish filters from informational labels and understand when a view has been filtered.

Performance

Define a practical target after testing in the intended environment. Record cold-load and repeat-load observations for the dashboard, story, and website. Tableau Public performance depends on network conditions, workbook complexity, browser behavior, and the service; do not promise a fixed load time without measurement. Avoid loading duplicate Tableau scripts and test embedded views independently.

Privacy and security

Use minimum necessary data, protect identifiers, follow the source license and institutional rules, and do not publish sensitive records without authorization. If the source is synthetic or de-identified, describe that only if the source documentation confirms it. Do not assume anonymization merely because names are absent.

Reliability

Document known data-quality issues, workbook version, publication date, and links. Test the website after publication. Keep a local copy of the workbook and source data where permitted. Record failures and the conditions under which they occurred.

Compatibility and accessibility

Test at least one desktop browser and a mobile browser. Verify that embedded views fit their container and that the user can scroll through long visualizations. Use accessible page headings, contrast, keyboard navigation, and text explanations for visual content.

Maintainability

Use clear filenames, documented calculations, stable field names, and a change log. When changing data or workbook calculations, rerun relevant tests and update the report and data dictionary.

Completion and review record

Prepared by: _____ Date: _____

Reviewed by: _____ Status: Draft / Reviewed / Approved

Document-control note: Update this file when the dataset, workbook, published views, or website changes. Record version/date and keep claims tied to evidence. This detailed document uses known project context and explicitly flags details that must be verified from the actual source files.
