Test Plan and Quality Checklist

Detailed project document · Prepared for project completion and review

Project reference information

Item	Known project detail
Project	Health360 Clinical & Healthcare Risk Analysis
Dataset size	5,000 patient/person records
Dataset fields	17 columns; exact field names and definitions must be copied from the source dataset's header row/data dictionary
Analytics tool	Tableau
Visual assets	9 worksheets/visualizations and a dashboard; a Tableau story for Patient Risk & Lifestyle Insights was also part of the project workflow
Repository	https://github.com/en25cs3010918-ctrl/Health360-Healthcare-Risk.git
Website	https://en25cs3010918-ctrl.github.io/Health360-Healthcare-Risk/
Scope caution	This is an educational data-visualization project. It is not a clinically validated diagnostic, prognostic, or treatment system.

Testing approach

Testing should cover data quality, calculation correctness, worksheet behavior, dashboard interactions, story consistency, website rendering, and publication access. Record actual outcomes; a checklist is not evidence of a passed test until it is executed.

Data tests

T01: source row count is recorded as 5,000 only if verified against the actual file. T02: 17 source columns are enumerated. T03: field types and units are reviewed. T04: duplicate records are measured and handled by documented rules. T05: missingness is quantified. T06: invalid ranges and inconsistent categories are reviewed. T07: cleaning changes are reproducible.

Calculation tests

T08: independently calculate selected counts and averages on a small sample. T09: verify denominator and null handling for percentages. T10: compare Tableau totals with a source-file pivot or independently computed result. T11: test filters against known subsets. T12: ensure derived categories match documented boundaries.

Visualization tests

T13: every chart has a meaningful title and labels. T14: axes and units are correct. T15: sorting and aggregation are expected. T16: tooltips show appropriate context. T17: filters/actions work and can be reset. T18: nulls and empty results are handled. T19: story sequence and annotations match the actual charts.

Publication tests

T20: open the dashboard directly while signed out. T21: open the story directly while signed out. T22: open the website in desktop Chrome. T23: test the website on mobile. T24: confirm no view is obscured or cropped. T25: test after a clean redeployment and record the tested URLs and date.

Test evidence table

For each test record: ID, precondition, steps, expected result, actual result, pass/fail, defect reference, tester, and date. If a test is not applicable, explain why rather than marking it passed.

Completion and review record

Prepared by: _____ Date: _____

Reviewed by: _____ Status: Draft / Reviewed / Approved

Document-control note: Update this file when the dataset, workbook, published views, or website changes. Record version/date and keep claims tied to evidence. This detailed document uses known project context and explicitly flags details that must be verified from the actual source files.
