Demonstration Script and Run of Show

Detailed project document · Prepared for project completion and review

Project reference information

Item	Known project detail
Project	Health360 Clinical & Healthcare Risk Analysis
Dataset size	5,000 patient/person records
Dataset fields	17 columns; exact field names and definitions must be copied from the source dataset's header row/data dictionary
Analytics tool	Tableau
Visual assets	9 worksheets/visualizations and a dashboard; a Tableau story for Patient Risk & Lifestyle Insights was also part of the project workflow
Repository	https://github.com/en25cs3010918-ctrl/Health360-Healthcare-Risk.git
Website	https://en25cs3010918-ctrl.github.io/Health360-Healthcare-Risk/
Scope caution	This is an educational data-visualization project. It is not a clinically validated diagnostic, prognostic, or treatment system.

Suggested run of show

Opening and objective (about 30–45 seconds); data source and preparation (about 60 seconds); dashboard overview (2–3 minutes); story walkthrough (1–2 minutes); methodology and validation (about 60 seconds); limitations and conclusion (30–45 seconds). Adjust duration to the actual event requirements.

Opening script

“This project is Health360 Clinical & Healthcare Risk Analysis. It explores a healthcare-related dataset through Tableau visualizations. I will show the dataset scope, how the dashboard is organized, how to navigate the story, and what limitations should be considered when interpreting the results.” Replace this script with your natural speaking style and verified details.

Dashboard walkthrough

Begin with the dashboard title and scope. Explain the measures and groups shown by each major view. Demonstrate one filter and explain which charts respond. Point out a specific verified observation, including the measure and comparison. Avoid claiming a result until it has been checked against the workbook.

Story walkthrough

Explain why the story sequence was chosen. For each story point, state what the chart shows, what question it addresses, and what cannot be concluded. Move through the actual story rather than describing views that are not present.

Demo readiness checklist

Confirm internet access; open the website and direct Tableau links; check signed-out access; set browser zoom; close unrelated tabs; prepare a backup PDF or screenshots; ensure no sensitive data is visible; rehearse transitions; and have the dataset source and report available for questions.

Fallback plan

If an embedded view spins, open the direct Tableau view. If the public view is unavailable, show an approved screenshot/export and clearly disclose that the live view is not loading. Do not claim that the live interaction was demonstrated if it was not.

Completion and review record
