# Presentation Slide Content and Speaker Notes

Detailed project document · Prepared for project completion and review

## Project reference information

| Item | Known project detail |
|---|---|
| Project | Health360 Clinical & Healthcare Risk Analysis |
| Dataset size | 5,000 patient/person records |
| Dataset fields | 17 columns; exact field names and definitions must be copied from the source dataset's header row/data dictionary |
| Analytics tool | Tableau |
| Visual assets | 9 worksheets/visualizations and a dashboard; a Tableau story for Patient Risk & Lifestyle Insights was also part of the project workflow |
| Repository | https://github.com/en25cs3010918-ctrl/Health360-Healthcare-Risk.git |
| Website | https://en25cs3010918-ctrl.github.io/Health360-Healthcare-Risk/ |
| Scope caution | This is an educational data-visualization project. It is not a clinically validated diagnostic, prognostic, or treatment system. |

## Slide 1 — Title

Health360 Clinical & Healthcare Risk Analysis. Add author/team, institution, course, and submission date. Use a screenshot of the actual project only if it is current and approved for use.

## Slide 2 — Problem and objectives

Explain why structured visualization helps users explore a complex table. State the project objective and boundaries. Speaker note: emphasize exploratory analysis, not clinical diagnosis.

## Slide 3 — Dataset

State the verified record and field counts, source, source date, license, and important data-quality observations. The project notes indicate 5,000 records and 17 columns; confirm these against the actual dataset. Do not reveal sensitive data.

## Slide 4 — Method and architecture

Show the real workflow from source file to cleaning, Tableau workbook, dashboard/story, and website. Name only tools actually used. Explain how key calculations were checked.

## Slides 5–7 — Visual findings

For each selected visualization, include the chart, question, key metric, observed pattern, and caveat. Insert actual chart screenshots and exact values from the workbook; do not fill this section with invented results.

## Slide 8 — Testing and limitations

Summarize executed data, calculation, interaction, and publishing tests. Explain limitations such as source coverage, missingness, possible confounding, and lack of clinical validation where applicable.

## Slide 9 — Conclusion and future work

State what was delivered and what the dashboard enables a user to explore. Identify practical next steps such as improved documentation, reproducible refresh, accessibility checks, or additional validated data.

## Slide design rules

Use readable type, a consistent palette, concise bullets, one primary message per slide, cited sources, and actual screenshots. Avoid dense paragraphs, unsupported metrics, or medical claims that go beyond the evidence.

## Completion and review record

Prepared by: _____ Date: _____

Reviewed by: _____ Status: Draft / Reviewed / Approved

Document-control note: Update this file when the dataset, workbook, published views, or website changes. Record version/date and keep claims tied to evidence. This detailed document uses known project context and explicitly flags details that must be verified from the actual source files.
